

Masterworks AI — Positioning & Messaging

The single source of truth for how Marketing, Sales, and Proposals talk about Masterworks AI. Version 0.1 (draft)

Owner: Lakshmi, Product Marketing | 4, July, 2026

How to use this document

This is a shared foundation with team-specific activation kits. Everyone should read Parts A-B (the strategy and the message that scales); each team then works from its own kit.

- Marketing → Parts A, B, and E (Marketing Kit): campaign themes, website and social copy, PR angles, GTM narrative, boilerplate.
- Sales → Parts A, B, C, D, and E (Sales Kit): value props, right to win, elevator pitches, cold email, discovery, objection handling, battlecards.
- Proposals → Parts A, B, and E (Proposals Kit): capability statements, technical differentiators, security/compliance language, proof points, reusable RFP answers.

Golden rule: the customer is the hero, Aurigo is the guide. Write “Agencies use Masterworks AI to ... (outcome),” never “Masterworks AI does ...” Lead with the outcome, ground every claim in proof, and cut empty modifiers like “AI-powered.”

Look for Δ To confirm callouts – these mark inputs Product Marketing still needs to validate before this moves out of draft.

Part A · Foundation

In brief — who Masterworks AI is for, the category it owns, and the three things competitors can’t copy.

The shared strategy every team builds on. Read top to bottom: why we exist, the market and category we play in, who we are for, why we win, and the positioning statements that anchor everything else.

A1 · The Why (Golden Circle)

Why: Public infrastructure shapes every community — and the teams who plan, fund, and deliver it deserve tools that help them anticipate and act, not just record work.

How: By building Masterworks AI on Lumina AI, Aurigo's AI platform grounded in 20+ years of capital-program data, so intelligence operates within the workflows teams already use — governed, explainable, and human-in-the-loop.

What: Masterworks AI — Copilot and ready-to-use agents that help capital teams find answers, predict risk, and take action without leaving their capital program.

A2 · Market & Category

Category: AI for capital program management — purpose-built for public infrastructure and facility owners. We frame Masterworks AI as intelligence built into the system of action, deliberately distinct from generic AI assistants and bolt-on copilots.

Why now

- **Complexity has outrun the tools.** Bigger portfolios, more funding rules, and more stakeholders — systems of record capture work but can't help teams anticipate or act.
- **Expertise is walking out the door.** As veteran planners and engineers retire, hard-won institutional knowledge leaves with them, just as program demands rise.
- **Data is siloed, insight comes late.** Project, funding, contract, and asset data live in disconnected systems, so critical signals surface too late to act on.

Market context

- **\$4.5B** — projected construction AI market size by 2026.
- **15-20%** — forecast-accuracy gains reported with AI.
- **10-15%** — reduction in planning effort with AI.

△ To confirm: source and date for the three market figures (used in Aurigo AI enablement deck, July 2026).

A3 · Best-Fit Customer & ICP

Best fit: public infrastructure and facility owners running active, funded capital programs who need to do more with lean teams while staying auditable and in control.

Segments to target

- Federal agencies
- State and large government agencies

Who's in the room

- Capital program / PMO directors
- Engineering & delivery leaders
- Finance & budget officers
- IT & security teams

Buying triggers

- A new bond or capital funding program
- Audit, transparency, or compliance pressure
- Leadership turnover & knowledge loss

- Rising backlog, delays, or overruns

Not a fit (walk-away signals)

- No active capital program or funding source
- Content with spreadsheets and no executive pressure
- Cloud or AI blocked by agency policy
- No budget cycle within the next 12 months

A4 · Competitive Alternatives & Right to Win

What buyers do instead of us: generic or bolt-on AI assistants, legacy systems of record, building it in-house (DIY), or the status quo of spreadsheets and manual review.

Three things competitors can't copy

- **20+ years of capital-program data.** Lumina's Foundation Data Model is grounded in thousands of real programs – it understands the terminology, relationships, and decisions others can only guess at.
- **Built into the system of action.** Not a bolt-on tool: Lumina runs inside Masterworks with live project, funding, contract, and asset context, so no data leaves the workflow.
- **Enterprise trust by design.** Built on a FedRAMP-Class C Certified platform, with ISO 42001 certification in progress, plus explainable answers, full audit trails, and human-in-the-loop governance.

Proof it's real

- 300+ infrastructure and facility owners
- \$300B+ in capital programs managed on Aurigo
- 7 agents available out of the box, plus Agent Builder.

A5 · Positioning Statements

Classic positioning statement (Geoffrey Moore)

For public infrastructure and facility owners who must deliver growing capital programs with lean teams, Masterworks AI is capital program management with AI built in that helps teams find answers, predict risk, and act inside the workflows they already use. Unlike bolt-on AI assistants or generic models, Masterworks AI is grounded in 20+ years of capital-program data, runs inside the system of action, and is governed, explainable, and enterprise-secure.

Positioning components (April Dunford)

- **Market category:** AI for capital program management.
- **Best-fit customers:** Public infrastructure and facility owners with active, funded capital programs.
- **Competitive alternatives:** Bolt-on/generic AI, legacy systems of record, DIY/in-house builds, spreadsheets.
- **Unique attributes:** Domain-grounded Lumina foundation data model; AI inside the system of action; governed and explainable; 7 ready-to-use agents plus Agent Builder.
- **Value (and proof):** Faster decisions, earlier risk detection, and more team capacity – with brand proof from Aurigo Masterworks, the platform Masterworks AI is built into: Utah DOT (\$19.5M/year) and Las Vegas (3+ months/year).

Part B · Messaging House

In brief — the umbrella message, value pillars, capabilities, and proof that scale across every channel.

The polished message that scales — build it once, use it everywhere. This is the single source of truth that powers website copy, decks, pitches, and proposals.

B1 · Umbrella Message & Taglines

Hero / umbrella message

Turn capital program insights into action — faster.

Positioning opener

“Aurigo brings AI to the work your team already does — no rip-and-replace.”

Tagline tiers

One-liner (≤10 words): AI built into your capital program — find answers, predict risk, act.

Short (≈25 words): Masterworks AI brings Copilot and ready-to-use agents into your capital program, so teams find answers, predict risks earlier, and act — inside the workflows they already use.

Long (≈50 words): Masterworks AI is capital program management with AI built in. Built on Lumina AI and grounded in 20+ years of capital-program data, it brings Copilot and ready-to-use agents into your workflows — helping teams find cited answers, predict cost and schedule risk earlier, and act with confidence, all governed and human-in-the-loop.

B2 · Top Value Pillars

The four ways Masterworks AI delivers value. These reflect real customer needs, not a feature list. (Mirrors the website’s four challenge cards.)

Value pillar	What it means for the customer	Proof
Do more with the team you have	Automate routine work and preserve institutional knowledge, so every team member accomplishes more without adding headcount.	PM agent performs 50%+ of administrative work; up to 25% of team capacity freed for higher-value work.
Stay ahead of growing complexity	Manage expanding portfolios, funding rules, regulations, and stakeholders with intelligence built into every workflow.	One governed platform spanning plan, fund, and deliver.
Turn disconnected data into confident decisions	Bring projects, funding, contracts, assets, and documents together so every decision rests on complete, trusted information.	95% faster retrieval across millions of data points; cited, source-linked answers.
Anticipate issues before they become problems	Identify schedule delays, budget risks, funding gaps, and compliance issues early — while there’s still time to act.	Alerts 1-2 reporting cycles earlier; 100% of active projects continuously monitored.

B3 · What It Does

Plain-language description

Masterworks AI brings Copilot and ready-to-use agents directly into the workflows teams use to plan, deliver, and maintain capital programs – so they can find answers, predict risk, automate routine work, and take the next best action without leaving Masterworks.

One-paragraph product description

Masterworks AI is the AI layer of Aurigo Masterworks, built on the Lumina platform and grounded in more than 20 years of capital-program data. Copilot lets teams ask questions in plain language and get cited answers from across program data, documents, contracts, schedules, and funding records. Ready-to-use agents take on defined jobs – planning, funding, RFIs, inspections, risk, and approvals – preparing work in Masterworks and routing it for human approval. Because the AI runs inside the system of action, no data leaves the workflow, and every recommendation is explainable, permissioned, and auditable. Teams start with 7 agents out of the box and use Agent Builder to automate the workflows unique to their programs.

B4 · Messaging Matrix

Maps each customer pain to the capability that solves it, why Aurigo is the one to solve it, and the resulting benefit. Use rows as modular proof-backed messages.

Customer pain	Capability	Why Aurigo (advantage)	Benefit
Experienced staff are retiring and institutional knowledge is walking out the door.	Copilot and agents capture, ground, and reuse program knowledge.	Expertise from 20+ years of capital-program data is encoded in every agent.	Do more with the team you have.
Programs are growing faster than headcount; teams drown in routine admin.	Agents automate routine tasks, coordination, and approvals.	AI acts inside the system of action; humans stay in the loop and approve.	Up to 25% of capacity freed; the PM agent handles 50%+ of admin work.
Project, funding, and contract data are siloed across systems.	Natural-language, cited answers across program data and documents.	Answers are grounded in your connected data and source-linked – no source, no answer.	95% faster retrieval and confident, defensible decisions.
Risks are discovered only after budgets or schedules are hit.	Continuous risk monitoring and prediction with early-warning alerts.	Alerts arrive 1-2 reporting cycles early, each explainable with contributing factors.	Intervene before projects turn red; 100% of active projects monitored.

B5 · Key Capabilities & Agent Catalog

The building blocks of the value story: three Copilot search agents, three planning agents, five delivery agents, plus Agent Builder. Each agent understands its job end-to-end, prepares work in Masterworks, routes it for human approval, and records every decision.

Agent / capability	Group	What it does	Outcome
Document Search Agent	Copilot	Scans large document sets for structured, citation-backed	95% faster retrieval; verifiable, source-linked answers.

<i>Agent / capability</i>	<i>Group</i>	<i>What it does</i>	<i>Outcome</i>
		<i>answers across PDFs, scanned images, and Office files.</i>	
<i>Data Search Agent</i>	<i>Copilot</i>	<i>Turns live program data into decision-ready answers on project health, risk, funding, and performance.</i>	<i>Analysis from weeks to minutes; surfaces compliance gaps.</i>
<i>Help Agent</i>	<i>Copilot</i>	<i>Delivers contextual 'how-to' guidance in the flow of work.</i>	<i>Faster onboarding, less support reliance, higher adoption.</i>
<i>Scenario Planning Agent</i>	<i>Planning</i>	<i>Compares thousands of funding scenarios and trade-offs.</i>	<i>Prioritization strategy with the greatest long-term public value.</i>
<i>Funding Agent</i>	<i>Planning</i>	<i>Identifies eligible funding and the best funding mix per project.</i>	<i>Maximize every funding dollar; reduce compliance risk.</i>
<i>Project Scoring Agent</i>	<i>Planning</i>	<i>Combines quantitative and qualitative analysis into explainable rankings.</i>	<i>Consistent, transparent, board-ready capital decisions.</i>
<i>Project Administration (PMO) Agent</i>	<i>Delivery</i>	<i>Automates routine project administration and continuously monitors project health.</i>	<i>Deliver more per project manager; 50%+ of admin automated.</i>
<i>RFI Agent</i>	<i>Delivery</i>	<i>Drafts responses and routes requests using project context.</i>	<i>Accelerate project decisions.</i>
<i>Risk Prediction (Early-Warning) Agent</i>	<i>Delivery</i>	<i>Continuously evaluates active projects for cost-overrun and schedule-delay risk.</i>	<i>Alerts 1-2 cycles early; 100% monitored; 100% explainable.</i>
<i>Field Inspection Agent</i>	<i>Delivery</i>	<i>Identifies quality trends across field observations and flags risks sooner.</i>	<i>Catch quality issues before costly rework.</i>
<i>Documentation Control Agent</i>	<i>Delivery</i>	<i>Automates submittal routing, compliance records, and version control.</i>	<i>Audit-ready documentation.</i>
<i>Agent Builder</i>	<i>Extend</i>	<i>Configure custom agents around your data, business rules, triggers, and approvals.</i>	<i>Automate the workflows unique to your programs.</i>

B6 · The AI Story & Lumina Platform

Masterworks AI is built on Lumina AI, Aurigo's AI platform, grounded in more than 20 years of capital-program expertise. Lumina AI combines domain knowledge with program data and workflow context so Masterworks AI can deliver relevant, explainable intelligence within the processes teams already use — intelligence built into every workflow.

What Lumina AI makes possible

- **Copilot:** ask questions in plain language and get instant, citation-backed answers grounded in your program data — right where work happens.
- **Ready-to-use agents:** take on defined jobs across planning and delivery, prepare work inside Masterworks, and route it for human approval.
- **Agent Builder:** configure your own agents around your data, business rules, triggers, and approvals.

Platform architecture (three layers)

- **Foundation Data Model:** unified data model, entity & relationship graph, prebuilt connectors, and contextual retrieval (RAG) — grounded in 20+ years of capital-program data.
- **AI Orchestration & Agent Framework:** prebuilt agent library, orchestration engine, tool & action connectors, and human-in-the-loop routing.
- **Responsible AI:** role-based access, audit trail & traceability, explainability & citations, and guardrails & compliance.

Built for enterprise trust

- **Governance:** every AI action is linked to a human owner — accountable, traceable decisions.
- **Security & Privacy:** data protected at every layer with enforced access controls; nothing leaves Masterworks and your data never trains public models.
- **Auditability:** complete audit trails for every AI action, decision, and workflow activity.
- **Guardrails:** monitor AI recommendations, actions, and outcomes with full visibility and control.
- **Certifications:** Built on a FedRAMP-Class C Certified platform, with ISO 42001 certification in progress.

Why it's different from generic AI tools (use in FAQ, objection handling, and RFPs):

- **Domain-grounded:** 20+ years of capital-program expertise encoded in every agent — not a generic model guessing at your terminology.
- **In-workflow:** runs inside Masterworks, the system of action, so no data leaves the workflow.
- **Explainable:** every answer is cited and every action auditable — no source, no answer.
- **Human-in-control:** agents prepare work; people approve.

B7 · Proof Points & Testimonials

Part C · Persona Value Props

In brief — the pain, value prop, and elevator pitch for each buyer and user in the room.

How the message lands for each person in the room. Use the value prop and elevator pitch for outreach and decks; use the discovery questions in live conversations.

C1 · Capital Program / PMO Director (economic buyer)

- **Measured on:** Delivering a growing program on time and on budget with a lean team.
- **Top pain:** The portfolio is expanding while expertise retires – and there’s no single view of risk across every project.
- **Value prop:** Deliver more without adding headcount. AI automates routine work and surfaces risk across 100% of projects, so leadership attention goes where it’s needed.
- **Elevator pitch (30 sec):** “You’re being asked to deliver a bigger program with the same team. Masterworks AI puts Copilot and ready-to-use agents inside the workflows your team already uses – routine work gets automated, risks surface one to two cycles earlier, and you see health across every project. Utah DOT already saves \$19.5M a year on Aurigo Masterworks – the platform this is built into.”
- **Discovery:** What’s pushing AI up the agenda now? How do you see risk across the whole portfolio today? What happens to institutional knowledge when someone retires?

C2 · Finance & Budget Officer

- **Measured on:** Defensible funding decisions, cost control, and audit-readiness.
- **Top pain:** Funding decisions are hard to defend when challenged, and often rest on incomplete or scattered data.
- **Value prop:** Defend every funding decision with evidence. Cited answers and complete audit trails make funding calls evidence-based and audit-ready; the Funding Agent recommends the best funding mix per project.
- **Elevator pitch (30 sec):** “When a funding decision gets challenged, can you defend it in minutes? Masterworks AI answers only from your program data, cites every source, and keeps a full audit trail – so every funding call is evidence-based and audit-ready.”
- **Discovery:** When a funding decision is challenged, how do you defend it today? How confident are you defending funding in an audit? Where does funding and contract data actually live?

C3 · Project / Portfolio Manager (user)

- **Measured on:** On-time, on-budget delivery with fewer surprises.
- **Top pain:** Too much routine administration, and risks discovered only after they hit budget or schedule.
- **Value prop:** Cut routine work and catch risk early. The PMO agent automates 50%+ of project administration; the Risk Prediction agent flags cost and schedule risk 1-2 reporting cycles before projects turn red, with a confidence score and the reasons why.
- **Elevator pitch (30 sec):** “No project manager can watch every signal on every project every day. Masterworks AI does – it automates over half your admin and flags cost and schedule risk one to two cycles before a project turns red, and tells you what’s driving it.”
- **Discovery:** What routine work would your team drop if it could? How do you catch budget or schedule risk today? Where does your team lose time chasing information?

C4 · IT & Security

- **Measured on:** Security, governance, compliance, and controlled AI adoption.
- **Top pain:** AI tools that export data, lack traceability, or invite shadow AI.

- **Value prop:** Enterprise-grade security and governance. Masterworks AI runs inside your tenant — no data leaves the workflow, nothing trains public models, every action is auditable and human-approved.
- **Elevator pitch (30 sec):** “Masterworks AI runs inside your Masterworks tenant — no data leaves the workflow and nothing trains public models. It’s built on a FedRAMP-Class C Certified platform, with ISO 42001 certification in progress, plus role-based access, full audit trails, and human-in-the-loop on every action.”
- **Discovery:** Where does agency policy stand on cloud and AI? What’s your bar for auditability and data residency? Who signs off on new platforms, and what’s their biggest concern?

Part D • Competitive Battlecards

In brief — how we win against bolt-on AI, legacy systems, DIY, and the named competitors.

What to say when a prospect is weighing bolt-on AI, a legacy system of record, or building it themselves. Lead with the three things competitors can’t copy (Part A4).

D1 • How we stack up against the alternatives

	Aurigo — Lumina	Bolt-on AI tools	Legacy / DIY
Domain data & context	20+ yrs capital-program data	Generic models, no domain grounding	Siloed data, not AI-ready
Where the AI runs	Inside Masterworks workflows	Separate app; data exported out	No AI inside the workflow
Governance & trust	FedRAMP-Class C Certified + full audit trails	Data often leaves your tenant	Spreadsheet risk, no traceability
Time to value	7 agents out of the box	Build & integrate it yourself	Months of custom work

D2 • Where the competition is on AI

Kahua is closest, Procore is coming from the contractor side, EcolInteractive has no real AI — here’s how we win each.

Competitor	Where they are on AI today	How Lumina wins
Procore	Procore AI on its ‘Helix’ layer — Assist copilot, Insights, and Agents + no-code Agent Builder (beta); trained on 3M+ projects; FedRAMP Moderate.	Built contractor-first; its owner AI only arrived in 2026 and is shallow. Lumina is purpose-built for owners with 20+ years of program data.
Kahua	Kahua Enterprise AI (2025) + the ‘Noa’ assistant (2026); first platform cleared to run AI inside a FedRAMP environment — security-first, governed.	Closest to us, but newer and narrower — mostly search, summarize, automate. Lumina also predicts risk and acts, with 7 agents live plus Agent Builder.
EcolInteractive	No real AI — automatic text summaries in STIP/TIP review; a narrow transportation-	No AI roadmap and limited scope. Lumina spans plan, fund, and deliver with

Competitor	Where they are on AI today	How Lumina wins
	programming niche (DOTs/MPOs, ~29 states).	governed AI across the entire capital program.

△ To confirm: competitor intelligence is current as of the July 2026 enablement deck – verify before any external use; keep competitive claims internal unless cleared.

D3 • Head-to-head battlecards

What they'll say, how you answer, and the question that exposes the gap.

Scenario	They say	You counter	Trap to set
vs. Bolt-on AI tools	'Point our AI model at any of your data.'	Lumina is grounded in 20+ years of capital-program data and runs inside Masterworks – cited answers, no data export.	Ask how they handle FedRAMP and where your data actually goes.
vs. Legacy systems of record	'You already have a system that records the work.'	Recording isn't acting – Lumina predicts risk and moves work forward, not just stores it.	Ask what their AI does beyond static dashboards.
vs. DIY / build in-house	'Our data team can just build this.'	7 agents live on day one and Agent Builder for the rest – years faster, secure, and fully supported.	Ask about their timeline, security review, and who maintains it.

D4 • Objection handling

Six pushbacks that stall AI deals – and how to turn each one.

Objection	Counter
"AI just makes things up – I can't trust it for funding calls."	Lumina answers only from your program data and cites every source – no source, no answer, with a full audit trail.
"We can't put our data into an AI model."	Nothing leaves Masterworks and your data never trains public models. Built on a FedRAMP-Class C Certified platform, with ISO 42001 certification in progress.
"Our incumbent or IT team will just bolt AI on."	Bolt-ons read generic data. Lumina is grounded in 20+ years of program data and acts inside the workflow.
"This is just a chatbot – a feature, not a purchase."	It assists, predicts overruns, and acts inside Aurigo Masterworks – the platform where Utah DOT projects \$100M in 5-year savings.
"We tried an AI pilot and it went nowhere."	Those sat beside the system of record. Lumina lives inside Aurigo Masterworks – where customers like Las Vegas save 3+ months of staff time a year.
"I can't get budget without proven ROI."	Start with one agent on one quantified pain; ROI lands in the first cycle. Aurigo Masterworks

Objection	Counter
	<i>customers like Wisconsin DOT have migrated 15,000 projects.</i>

Part E • Team Activation Kits

In brief — ready-to-use assets for Marketing, Sales, and Proposals — pull language, don't reinvent.

Everything above is the shared source of truth. These kits turn it into day-to-day assets for each team. Pull language directly — don't reinvent it.

E1 • Marketing Kit

Campaign themes

- **Do more with the team you have.** Workforce shortage and knowledge loss — speaks to directors and operations leaders.
- **See it before it turns red.** Proactive risk and early-warning — speaks to PMs and delivery leaders.
- **AI you can defend in an audit.** Governance, explainability, trust — speaks to finance, IT, and public accountability.
- **No rip-and-replace.** AI inside the workflows teams already use — lowers adoption risk.
- **Maximize every funding dollar.** Planning and funding optimization — speaks to finance and program directors.

Messaging by funnel stage

Stage	Lead message	Assets / CTA
Awareness	Capital programs have outgrown systems built only to record work.	Thought leadership, PR, social, category explainer.
Consideration	AI built into your capital program — find answers, predict risk, and act.	Website, agent explainers, webinar, solution briefs.
Decision	7 agents live now, human-in-the-loop, built on a FedRAMP-Class C Certified platform — prove it on one agent.	Demo (with their data), case study, ROI conversation.

Social & PR angles

- Lumina platform — “intelligence built into every workflow,” grounded in 20+ years of capital-program data.
- 7 ready-to-use agents plus Agent Builder — AI that acts, not just answers.
- Aurigo Masterworks customer wins (platform brand proof, not Masterworks AI-specific): Utah DOT (\$19.5M/year), Las Vegas (3+ months/year), Wisconsin DOT (15,000 projects).
- Enterprise trust: Built on a FedRAMP-Class C Certified platform, with ISO 42001 certification in progress — explainable AI for the public sector.
- Thought leadership: the retiring-workforce knowledge cliff in public infrastructure.

Website copy blocks

- **Hero:** “Turn capital program insights into action – faster.”
- **Subhead:** “Masterworks AI brings Copilot and ready-to-use agents into the workflows your teams already use – find answers, predict risks, automate routine work, and take the next best action without leaving your capital program.”
- **CTA:** “Request a demo” / “Contact us – scale up the potential of your programs.”

SEO keyword targets

- capital program management software
- AI for capital programs
- construction AI for owners
- AI capital planning
- DOT project management software
- public infrastructure project management
- capital project risk prediction
- government construction management software

GTM / launch narrative

Masterworks AI brings Aurigo’s Lumina AI platform into the Masterworks capital program platform owners already trust. Grounded in 20+ years of capital-program data, it brings Copilot and ready-to-use agents into the plan-fund-deliver workflow – so lean teams do more, catch risk earlier, and act with confidence, all inside a governed, auditable system. Launch priority: land the “AI inside the system of action, not a bolt-on” category story, proven by named public-sector outcomes.

Boilerplate

- **About Masterworks AI:** Masterworks AI brings Copilot and ready-to-use agents into the workflows used to plan, deliver, and maintain capital programs. Built on Lumina AI, Aurigo’s AI platform grounded in 20+ years of capital-program expertise, it delivers relevant, explainable intelligence inside the processes teams already use – governed, auditable, and human-in-the-loop.

△ To confirm: official Aurigo corporate boilerplate (“About Aurigo”), trademark/legal lines, and approved CTA wording.

E2 • Sales Kit

Open with: “Aurigo brings AI to the work your team already does – no rip-and-replace.”

- **Why Aurigo (one line):** Purpose-built for owners, grounded in 20+ years of capital-program data, running inside the system of action – with 7 agents live and enterprise trust (FedRAMP-Class C Certified platform, human-in-the-loop).

Company elevator pitch

“Capital programs have outgrown systems built only to record work – teams are lean, expertise is retiring, and data is siloed. Masterworks AI brings Copilot and ready-to-use agents into the workflows teams already use, so they find answers instantly, predict risk 1-2 cycles early, and act, all inside a governed, auditable system. It’s built on Lumina AI, grounded in 20+ years of capital-program data – and owners like Utah DOT already save \$19.5M a year on Aurigo Masterworks.”

Cold email templates

Email 1 – trigger: rising overruns / late risk (to a program or PMO director)

Subject: Catching capital risk before it turns red

Hi [Name] – most capital teams learn a project is in trouble only after the budget or schedule is already hit. Masterworks AI flags cost and schedule risk 1-2 reporting cycles earlier, across 100% of your projects, and explains why. Utah DOT saves \$19.5M a year on Aurigo Masterworks. Worth a 20-minute look using your own program type? – [Rep]

Email 2 – trigger: workforce shortage / knowledge loss (to a director or operations leader)

Subject: Doing more with the team you have

Hi [Name] – as experienced planners retire, their know-how walks out the door just as programs grow. Masterworks AI puts Copilot and ready-to-use agents inside the workflows your team already uses – automating routine work and preserving institutional knowledge, with no rip-and-replace. Aurigo Masterworks customer Las Vegas Public Works freed up 3+ months of staff time a year. Open to a short demo? – [Rep]

Discovery script

- **Uncover the cost of pain:** What does a month of schedule slip cost this program? How often do projects finish over budget – and by how much? When a funding decision is challenged, how do you defend it? (Listen for a number they can quantify.)
- **Map the work & data:** How much time is spent hunting for contract or funding data? Where do project, funding, and contract records actually live? What routine work would your team drop if it could? (Listen for manual effort and scattered data.)
- **Read urgency & fit:** What's pushing AI up the agenda now? Who signs off, and what's their biggest concern? When is your next budget or planning cycle? (Listen for a funded, time-bound trigger.)

Qualify (MEDDIC-lite)

- **Metric:** A budget, schedule, or overrun pain they can quantify.
- **Economic buyer:** Program director, CIO, or public works head.
- **Criteria:** Security, in-workflow AI, fast time-to-value.
- **Champion:** Someone burned by manual work or bad data.

Red flags — walk away

- No active capital program or funding source
- Content with spreadsheets, no executive pressure
- Cloud or AI blocked by agency policy
- No budget cycle within 12 months.

Advance the deal

- Book a Lumina demo using their own data
- Share the Utah DOT case study
- Map one agent to their top pain
- Bring security in early on FedRAMP.

Demo flow

- **Copilot answer:** a cited answer pulled from their contracts and funding records.
- **Risk flagged early:** an overrun or schedule risk surfaced before it escalates.
- **Action in-workflow:** a ready-to-use agent completes a real step inside Masterworks. Pause on the citation — that’s the trust moment.

Pricing talk track

- Anchor on value, not seats — ask: “What is one avoided overrun worth to you?”
- Position Masterworks AI as a built-in Masterworks capability, not a bolt-on; each agent is priced separately as an add-on.
- Start with one agent on their top pain, then expand; bring the economic buyer, security, and deal desk in early.

△ To confirm: pricing is not locked — do not quote firm numbers externally.

E3 · Proposals / RFP Kit

Reusable, source-of-truth answers for RFPs and security questionnaires. Map each common requirement theme to the response and proof below.

<i>RFP requirement theme</i>	<i>Masterworks AI response</i>	<i>Proof / evidence</i>
<i>AI & automation capabilities</i>	<i>Copilot (document, data, and help search) plus 7 ready-to-use agents across planning and delivery, extensible with Agent Builder.</i>	<i>95% faster retrieval; PM agent automates 50%+ of administration.</i>
<i>Risk & performance management</i>	<i>Risk Prediction agent continuously monitors cost and schedule signals and alerts 1-2 cycles before escalation, with confidence scores and contributing factors.</i>	<i>100% of active projects monitored; 100% explainable alerts.</i>
<i>Security & compliance</i>	<i>Built on a FedRAMP-Class C Certified platform, with ISO 42001 certification in progress; role-based access; data never leaves the tenant or trains public models.</i>	<i>Enterprise-grade, public-sector ready.</i>
<i>Governance & explainability</i>	<i>Every AI action is linked to a human owner; answers are cited; complete audit trails; human-in-the-loop approvals.</i>	<i>Traceability by default.</i>
<i>Data integration & architecture</i>	<i>Lumina Foundation Data Model — unified data model, entity & relationship graph, prebuilt connectors, contextual retrieval (RAG).</i>	<i>Grounded in 20+ years of capital-program data.</i>
<i>Platform & functional scope</i>	<i>Masterworks modules span capital planning, federal-aid reimbursement, estimation & bidding, right of way, materials, real property, asset</i>	<i>One platform across plan, fund, deliver, and maintain.</i>

<i>RFP requirement theme</i>	<i>Masterworks AI response</i>	<i>Proof / evidence</i>
	<i>condition, construction PM, and grants management.</i>	
<i>Implementation & time-to-value</i>	<i>7 agents out of the box; AI runs inside existing workflows – no rip-and-replace.</i>	<i>Start with one agent, then expand.</i>
<i>Past performance / references</i>	<i>Aurigo Masterworks platform references: Utah DOT, Las Vegas Public Works, Tampa Bay Water District, Wisconsin DOT.</i>	<i>\$19.5M/yr; 3+ months/yr saved; serves 2.3M citizens; 15,000 projects migrated.</i>

Technical differentiators

- Domain-grounded Foundation Data Model – not a generic large language model.
- AI runs inside the system of action – no data export.
- Explainable, cited outputs with complete audit trails.
- Human-in-the-loop on every agent action.
- 7 ready-to-use agents plus no-code Agent Builder.
- Enterprise security – built on a FedRAMP-Class C Certified platform, with ISO 42001 certification in progress, plus role-based access.

Security & compliance boilerplate

Masterworks AI operates entirely within the customer’s Masterworks environment. Program data is protected at every layer with enforced access controls and role-based permissions, is never used to train public models, and does not leave the tenant. Every AI recommendation, action, and outcome is explainable, permissioned, and captured in a complete audit trail. Masterworks AI is built on a FedRAMP-Class C Certified platform, with ISO 42001 certification in progress.

RFP FAQ answer library

What is Masterworks AI?

Masterworks AI is Masterworks with Aurigo’s Lumina AI platform built in – Copilot and ready-to-use agents that help capital teams find answers, predict risk, and act inside the workflows they already use. It is built on Lumina, Aurigo’s AI platform grounded in 20+ years of capital-program expertise.

How is Masterworks AI different from generic AI tools?

Generic tools run on generic models and often export your data. Masterworks AI is grounded in 20+ years of capital-program data, runs inside Masterworks (the system of action) so no data leaves the workflow, and makes every answer cited and every action auditable.

What work can Masterworks AI help automate?

Document and data search, RFI drafting and routing, project administration, field-inspection analysis, documentation control, scenario planning, funding optimization, project scoring, and continuous risk monitoring – with humans approving each action.

Can organizations build agents for their own processes?

Yes. Start with ready-to-use agents for planning, delivery, and maintenance; with Agent Builder, teams configure their own agents around specific data, business rules, triggers, and approval requirements – without building AI from the ground up.

How does Masterworks AI keep people in control?

Agents prepare work and route it for human approval. Every AI action is linked to a human owner, permissioned, cited, and recorded in a complete audit trail, with role-based access and guardrails keeping AI governed.

Part F · Governance & Maintenance

In brief – voice, word list, checklist, ownership, and the open items to confirm before external use.

Keep the message consistent and the document trustworthy. Run new copy through the checklist before it ships.

F1 · Voice & tone

- Customer is the hero, Aurigo is the guide – write “Agencies use Masterworks AI to... (outcome),” not “Masterworks AI does...”
- Lead with the outcome, then explain how.
- Plain language – cut jargon and empty modifiers (“AI-powered,” “revolutionary,” “cutting-edge”).
- Be concrete – real numbers and named outcomes beat adjectives.
- Conversational and human – it should pass the read-aloud test.

F2 · Preferred word list

Use	Avoid
“Masterworks AI” (the product); “Lumina” (the platform it’s built on)	“the AI” / “the tool” generically
“ready-to-use agents,” “Copilot”	“bots,” “chatbots”
“capital programs,” “owners,” “agencies”	generic “customers” in owner-facing copy
“predict, act, find answers,” “system of action”	“AI-powered,” “revolutionary,” “next-gen”
“explainable,” “human-in-the-loop,” “audit trail”	vague “smart” / “intelligent” as filler

F3 · The check-yourself checklist

- **Clear:** Would someone who’s never heard of Aurigo understand it?
- **Outcome-first:** Does it lead with the result, not the feature?
- **Human:** Read aloud, does it sound like a person?
- **Grounded:** Is every claim backed by data or a named customer?
- **Trustworthy:** For AI claims, is explainability or human-in-the-loop present?
- **On-category:** Does it reinforce “AI inside the system of action, not a bolt-on”?

F4 · Ownership & version control

- This document is the single source of truth for outbound Masterworks AI messaging – pull from it, don't reinvent.
- Review each product release, or quarterly at minimum; keep a change log of material edits.
- **⚠ To confirm:** document owner/approver and the leadership sign-off path.

F5 · Open inputs to confirm

Consolidated list of every item flagged ⚠ above – resolve before external use:

- Product scope: is Masterworks AI the enterprise platform, an AI layer across Masterworks, or standalone?
- Source and date for the market figures (\$4.5B / 15-20% / 10-15%).
- Data-residency specifics for RFP certification language.
- Attributed, cleared customer quotes for each named reference.
- Official “About Aurigo” corporate boilerplate, trademark/legal lines, approved CTA wording.
- Pricing (not locked – no firm external numbers).
- Clearance to use competitor intelligence externally.
- SEO keyword validation against demand data.
